

DANG HUY HOANG

Software Engineer

dhuyhoang1406@gmail.com | 0898 840 017 | [Github](#) | [Linkedin](#) | Ho Chi Minh City, Vietnam

OBJECTIVE

Final-year Software Engineering student at Saigon University (GPA 3.66/4.00) with hands-on experience building full-stack web applications using React, Next.js, TypeScript, NestJS, and relational databases. Experienced in developing responsive user interfaces, building and integrating RESTful APIs, designing database models, and collaborating through Git-based development workflows. Familiar with Docker, CI/CD, and AI-assisted development tools including Cursor, GitHub Copilot, Claude, and OpenAI Codex. Seeking a Fresher Fullstack Developer position to contribute to real-world SaaS products while strengthening my full-stack software engineering skills.

EDUCATION

Saigon University — Bachelor of Science in Software Engineering
GPA: 3.66 / 4.00

Ho Chi Minh City, Vietnam
Sep 2022 – Present

CERTIFICATIONS & ACHIEVEMENTS

TOEIC 705 (Listening & Reading) — Professional Working Proficiency

Aug 2025

Top 10 Finalist — WebDev Studios Competition (HeritaHub)

May 2025

Academic Merit Scholarships — Awarded 4 semesters for top academic performance

2022 - 2025

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#

Frontend: React, Next.js, React Native, Flutter, Redux Toolkit, HTML5, CSS3

Backend: Node.js, NestJS, ASP.NET Core (.NET 8), RESTful APIs, JWT, Microservices, Clean Architecture

Databases & Storage: PostgreSQL, SQL Server, MySQL, Neo4j, Redis, Cloudinary

Cloud & DevOps: AWS (Foundational Knowledge), Docker, Docker Compose, GitHub Actions, Git/GitHub, Linux/Ubuntu

Computer Science: Data Structures & Algorithms, OOP, SOLID, Database Design

AI & Developer Tools: OpenAI API, Gemini API, LLM API Integration, OpenAI Codex, GitHub Copilot, Cursor, ChatGPT, Claude

WORK EXPERIENCE

Best HR Solution

Fullstack Engineer Intern

May 2026 – Jul 2026

Tech stack: Next.js, NestJS OS: Ubuntu

- Developed and maintained full-stack features using React, Next.js, and NestJS for an AI-powered recruitment platform, supporting JD/CV standardization and candidate-job matching workflows.
- Analyzed feature requirements, implemented responsive frontend workflows, and integrated React-based interfaces with RESTful backend services.
- Collaborated through Git/GitHub workflows, tested APIs with Postman, and worked in Ubuntu-based multi-service development environments.

Dragon Vision

Fullstack Developer — Graduation Intern

Mar 2026 – Apr 2026

- Designed backend domain models and relational data structures using PostgreSQL/PostGIS, following a modular architecture to support maintainable and scalable development.
- Contributed to backend components and RESTful API integration within a Next.js and TypeScript web platform while collaborating across application modules.
- Worked in a Git-based development workflow with code reviews and used Docker Compose to run and manage reproducible multi-service development environments.

PROJECT EXPERIENCE

LifeHelper — AI-Powered Personal Productivity Platform

Software Engineer | Personal Project

Aug 2026 – Present

Tech stack: Flutter, NestJS, TypeScript, PostgreSQL, Prisma, Redis, Docker, GitHub Actions

- Designed a 6-service microservices architecture with isolated database ownership and clear bounded contexts across identity, productivity, AI, document, notification, and analytics services.
- Built a Clean Architecture-based backend foundation using NestJS, Prisma, PostgreSQL, Redis, and Docker Compose, with domain modeling, repository abstractions, persistence mappers, per-service migrations, and integration testing.
- Designed an event-driven and AWS-oriented architecture using transactional outbox, idempotent consumer patterns, Amazon SQS/DLQ, and a production deployment model targeting ECS Fargate, RDS, ElastiCache, S3, and CloudWatch.
- Established GitHub Actions CI and automated OpenAI Codex PR reviews for linting, type checking, testing, Prisma validation, build verification, and code-quality feedback.

GitHub: [Repository](#)

E-commerce Clothing Platform

Software Engineer | University Project (Team: 6)

Sep 2025 – Dec 2025

Tech stack: React, .NET 8, SQL Server, Redis, Cloudinary, Gemini API

- Developed backend and application features including authentication, authorization, customer management, inventory management, real-time chat, and administrative workflows.
- Improved data integrity under concurrent requests by implementing optimistic locking for inventory operations, preventing overselling scenarios.
- Built an AI chatbot using Node.js and Gemini API with Redis caching to reduce redundant external API calls and improve response latency.

HeritaHub — Cultural Heritage Social App

Software Engineer | Competition Project (Team: 5) — **Top 10**

Feb 2025 – Apr 2025

Finalist

Tech stack: React Native, Expo, NestJS, MySQL, Neo4j, Socket.IO, JWT, Argon2

- Designed database schemas and built RESTful APIs with NestJS for user profiles, real-time chat, and heritage-site modules while integrating them with a React Native mobile application.
- Used Neo4j to model relationships between heritage sites and support efficient graph-based recommendation queries.
- Implemented real-time messaging using Socket.IO and NestJS to support bidirectional communication between concurrent users.
